

# Particle Boron / Xenon / Argon Carrier Board for Unprotected Environments

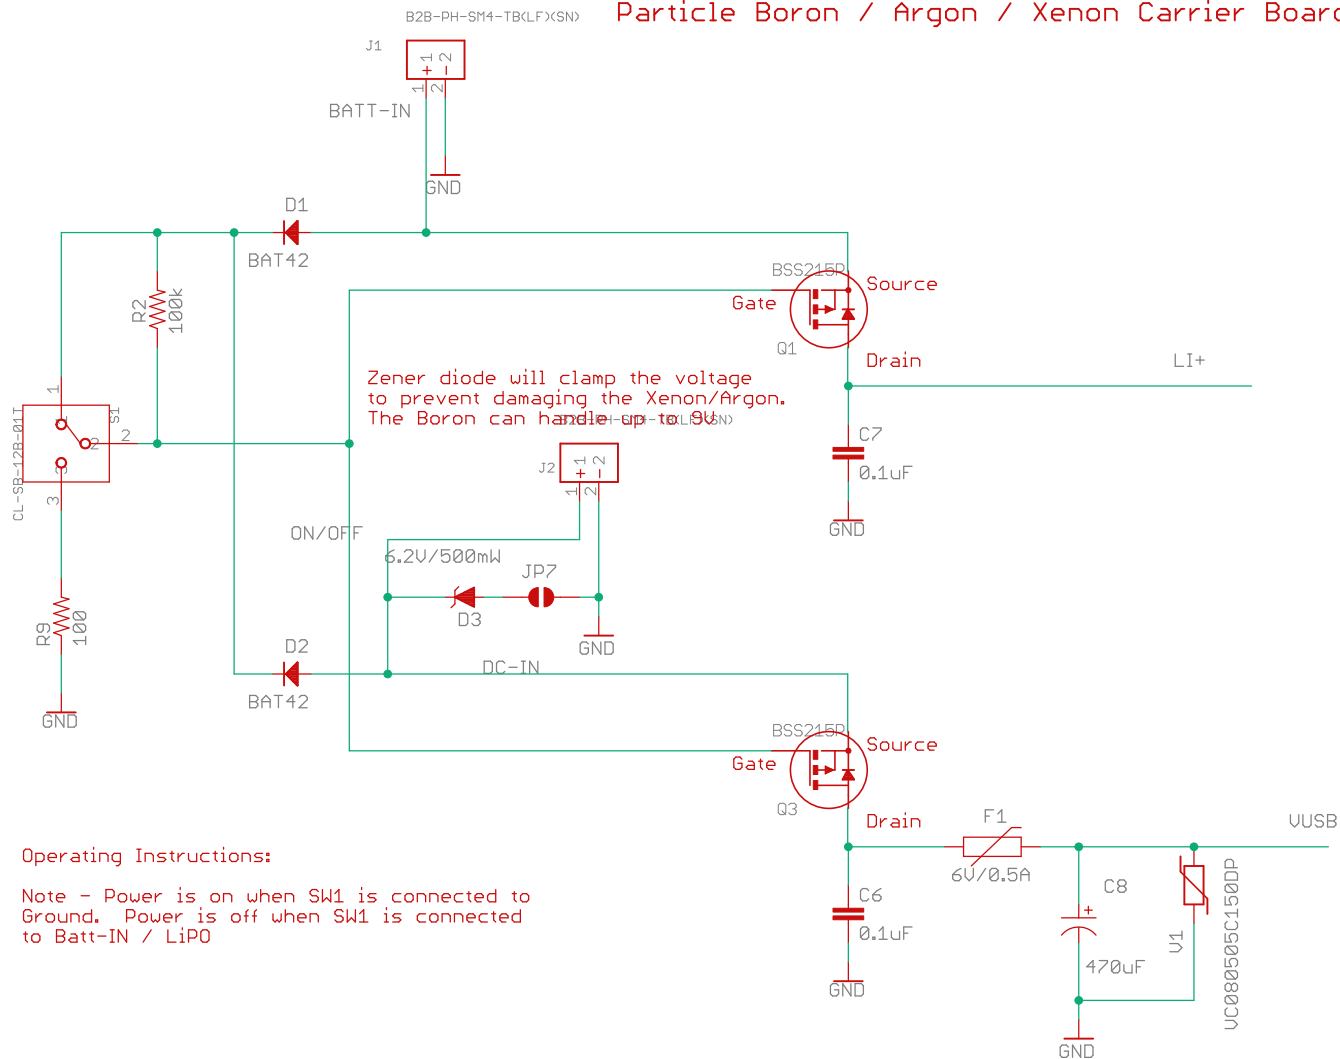

Power either with DC source or Solar Panel - JST connector  
 1) External Power: 5V DC @ 2A  
 2) Solar Power: Recommend 3-5W @ 6V

 chip@mcclellands.org

v1.7

## Particle Boron / Argon / Xenon Carrier Board - Power Control

### Operating Instructions:

SW1 - Connects / disconnects power for long term storage and transport. Only RTC VBatt runs when the switch is off.

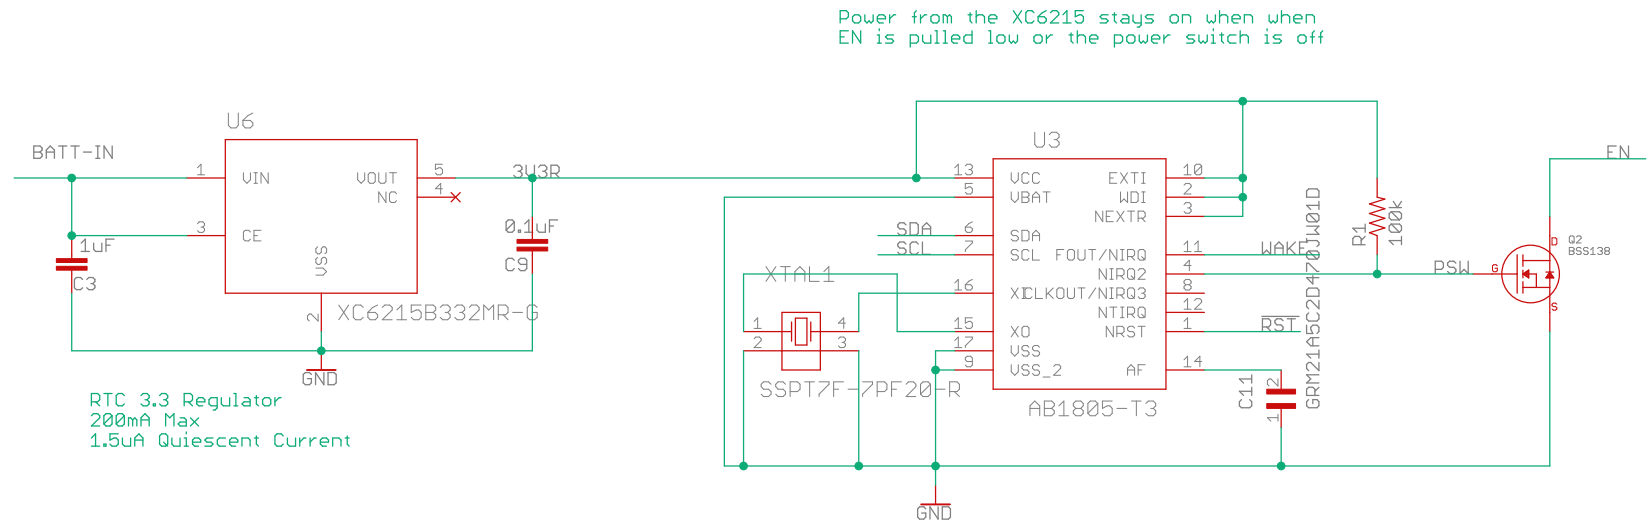

SW1 - Enables the two power switches and is powered by either Battery or DC-In

RTC Power will be the higher or Li+ or DC-In

Chip McClelland

v1.7

## Particle Boron / Argon / Xenon Carrier Board - Real Time Clock

Based on this Application Note  
<https://github.com/particle-iot/app-notes/tree/master/AN023-Watchdog-Timers>

### Operating Instructions:

BATT-IN is on whenever a battery is connected

Li+ is on when there is a battery and when the switch SW1 is on.

This circuit combines both RTC and watchdog functionality

v1.7

#### CHANGE LOG

- 1.5 - Changed to AB1805 for RTC and Watchdog - Major Change
- 1.6 - Reduced the number of Qwiic connectors - Minor Change
- 1.6a - Changed to vertical input for JST connectors - Minor Change
- 1.7 - Changed high-side switching from TI TPS22810 to P-MOSFET BSS215P and the Crystal- Minor Change
